

Write a method in ruby that will accept a year as a parameter and return true if the year is a leap year and will return false otherwise.

### **Requirements:**

You **MUST** do the following:

- 1) name the file **leap\_year.rb**
- 2) name the method **leap\_year?**

Steps 1 and 2 will be autograded (you will fail my tests if they are not true).

### **Resources:**

You're welcome to use an AI tool like CoPilot if you want to.
